DETAILED ACTION

1. Claims 1-12 are pending in the instant application.
- 2.

Election/Restrictions

3. Restriction to one of the following inventions is required under 35 U.S.C. § 121:
 - I. Claims 1-10, drawn to data recovery using one clock generating circuits, classified in class 375, subclass 355 (figures 1, 4, 6, and 8).
 - II. Claims 11-12, drawn to data recovery using two clock generating circuits, classified in class 375, subclass 355 (figure 11).

The inventions are distinct, each from the other because of the following reasons:

4. Inventions I and II are directed to a related field of art. The related inventions are distinct if the (1) the inventions as claimed are either not capable of use together or can have a materially different design, mode of operation, function, or effect; (2) the inventions do not overlap in scope, i.e., are mutually exclusive; and (3) the inventions as claimed are not obvious variants. See MPEP § 806.05(j). In the instant case, the inventions as claimed are mutually exclusive and are not obvious variants of each other. Furthermore, the inventions as claimed do not encompass overlapping subject matter and there is nothing of record to show them to be obvious variants.
5. This application contains claims directed to the following patentably distinct species:

A. Claims 1-4, wherein the variable delaying unit is "between the voltage control circuit and the phase comparator." (figure 4 and 10).

B. Claims 5-7, wherein the variable delaying unit is "between the frequency divider and the phase comparator." (figure 6).

C. Claims 8-10, wherein the variable delaying unit is "at a front stage of the data identifier." (figure 8).

The species are independent or distinct because they are mutually exclusive and are not obvious variants of each other.

Applicant is required under 35 U.S.C. § 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claim 1 is generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which depend from or otherwise require all the limitations of an allowable generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

6. Applicant is required under 35 U.S.C. § 121 to elect a single disclosed species of a single invention. That is, if invention I is elected, one species of invention I (i.e. A, B, or C) must be elected. If invention II is elected, no selection of a species is required as invention II contains only one species.

7. A telephone call was made to James A. LaBarre on August 22, 2007 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse. Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.
